Hammerfest Changes November 2016

Changes must be complete and tested by 11/18

1) Change the sort order of the races on the Races Admin page.

2) Confirm the functionality of the refresh button

3) Export the leaderboards

1) Change the sort order of the races on the Races Admin page.

Currently the races are sorting by date ASC, change it to DESC

http://app.hammerfest.bike/admin/races

Races   New Race

Name	Stages	Roster	Start Date	End Date			
Fall Five	5	5	2015-12-11	2015-12-20	Manage Results	Edit	Destroy
Trapper's Solo Test	3	1	2016-01-19	2016-01-19	Manage Results	Edit	Destroy

Zwift November Hammerfest 2016 - Men Power	3	20	2016-11-21	2016-11-25	Manage Results	Edit	Destroy
Zwift November Hammerfest 2016 - Men zPower	3	3	2016-11-21	2016-11-25	Manage Results	Edit	Destroy
Zwift November Hammerfest 2016 - Women	3	2	2016-11-21	2016-11-25	Manage Results	Edit	Destroy

2) Confirm the functionality of the refresh button

There is a refresh button that is on the Manage results page for the overall leaderboard.

Does it work? If it does how does it work? I believe it was there because if I manually add a race result, the leaderboard was not updating. However I think it is no longer needed based on the changes you previously made for the leaderboard. Let me know what it is doing. If it is going nothing, remove it.
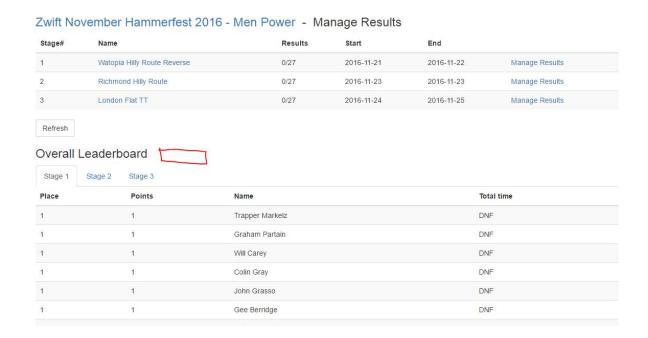

3) Export the leaderboards

Everywhere there is a leaderboard, I'd like a button that exports the HTML of the leaderboard so I can copy and paste the results.

The Overall Leaderboard needs an export, and each stage result leaderboard needs an export.

On the stage leaderboards, put an export link or button here:

On the overall leaderboard, put it here:

Whatever the active overall leaderboard tab is, determines which leaderboard should be exported.

When the link is clicked, pop up a modal (http://v4-alpha.getbootstrap.com/components/modal/)

The modal should have a textarea on it that is displaying the raw html for the leaderboard that includes everything in the <table></table> so that I can copy the entire table to my clipboard and paste it into another form taking all the data with it.

In addition, add these style elements so that the table is formatted correctly when it is pasted into the web software:

<style>
.hftable {width:100%; border-collapse: collapse;}
th, td {text-align: left; border: 1px solid gray; padding: 5px;}
</style>

And also add a class to the exported table so that the styles are used.

<table class="hftable">

It will look like this:

🚲 **Hammerfest**

Zwift November Hammerfest 2016 - Men Power - Manage Results
